

Visit to SuperTerminal 1, HACTL

for AScaOAL Programme, Division of Applied Science and Technology, Community College of City University

On 13th November 2015, 29 Year-2 students from Associate of Science in Airport Operations and Aviation Logistics (AScaOAL) visited the SuperTerminal 1 of the Hong Kong Air Cargo Terminals Limited (HACTL) at the Hong Kong International Airport. SuperTerminal 1 is the world largest air cargo terminal with fully automated cargo storage and retrieval system. This visit was led by Mr. Andrew Yam, Lecturer at the Division of Applied Science and Technology of CCCU, and hosted by Mr. Simon Yap, Manager of Operation Training Services at HACTL.

This visit broadened the horizon of the students in the air freight industry by exploring the daily operations and the career prospect in the aviation logistics giant in Hong Kong. It also gave a good opportunity for students to connect the disciplinary knowledge learnt from the course AST21616 Air Freight Logistics, for example unit load devices, special cargo handling, import & export process, to a real practice.
