

U-21 RFID Awards Presentation

"U-21 RFID Awards" was established in 2009. This competition aims to provide students an opportunity to think about how RFID technologies can be applied to address well-defined business issues or daily life problems. It is opened to both full-time and part-time tertiary students of local institutions, to demonstrate their creativity in developing useful applications.

This year we got three groups of students participated in this competition. Two groups are from Associate of Science in Information Systems Development, while one group is from the Associate of Science in Network and Systems Administration. After a couple of months hard work, they were successfully shortlisted to the final and awarded a Certificate of Merit.

The competition was concluded by an award presentation held at the Hong Kong Convention and Exhibition Centre on 9 November 2012.

The following gives the details of their projects.

Electronic Data Card using RFID

Student	Char Lik Hang
Supervisor	Dr. Tsoi Yau-Chat
